WFE 2009 domestic market segmentation survey

October 2010
Objectives of the survey

- Determine the weight of each of the following four tiers (large, medium, small, micro market cap segments) in each single exchange in terms of market capitalization, number of listed companies, share trading value and number of trades.

- Identify the segments which contribute the most to exchange business and revenues.

- Analyze the liquidity of each segment, using the turnover velocity ratio.

- In the following slides, results are displayed at:
  1. WFE global level
  2. regional levels, as well as
  3. for each individual member who has answered the survey questionnaire.
Domestic market cap was split into listed companies classes according to their relative size and thresholds into 4 segments:

1. **Large market cap segment**: domestic companies with a market cap over USD 1.3 bn

2. **Mid market cap segment**: domestic companies with a market cap comprised between USD 200 m and 1.3 bn

3. **Small market cap segment**: domestic companies with a market cap comprised between USD 65 m and 200 m

4. **Micro market cap segment**: domestic companies with a market cap less than USD 65 m

The same threshold levels were kept for this third survey.
In addition to the number of domestic listed companies, 3 other market indicators were also distributed according to these 4 segments:

1. number of domestic listed companies
2. value of domestic share trading on the EOB; and
3. number of trades of domestic shares on EOB

Turnover velocities were calculated by using the yearly average ratio between domestic share trading value of each segment and its relative market cap.
Study is based on 45 answers received from the following members:

**Americas**
- Bermuda SE
- BM&FBOVESPA
- Buenos Aires SE
- Lima SE
- Mexican Exchange
- NASDAQ OMX
- NYSE Euronext US
- Santiago SE
- TSX Group

**Asia - Pacific**
- Bursa Malaysia
- Colombo SE
- Hong Kong Exchanges
- Indonesia Exchange
- Korea Exchange
- Osaka SE
- Philippine SE
- Shanghai SE
- Singapore Exchange
- Taiwan SE Corp.
- Thailand SE
- Tokyo SE

**EMEA**
- Amman SE

- Luxembourg SE
- Mauritius SE
- MICEX
- NYSE Euronext Europe
- Oslo Bors
- Saudi Stock Market
- SIX Swiss Exchange
- Tehran SE
- Tel Aviv SE
- Warsaw SE
- Wiener Börse
Main findings

**Segmentation of market cap at WFE level**

- With no surprise, market cap of WFE exchanges was by far dominated by the large market cap companies (74% in 2009) up from 67% recorded in 2008. This surge was due to the strong recovery in global markets in 2009 (+46% in USD terms in WFE total market cap)
- The 3 other segments experienced a reduction of their share with the mid companies segment suffering the most, receding from 21% to 16%

**Segmentation of listing at WFE level**

- Listing of domestic companies on WFE exchanges was dominated by micro cap companies which represented 48% in 2009 against 58% in 2008, getting back to its level registered in 2007 (46%); the number of large companies was the lowest with 13% in 2009 v. 8% in 2008
- The core of listing remained dominated by small & micro cap companies representing all together 64%

**Segmentation of share turnover at WFE level**

- In a general context of reduction of share trading activity in 2009 (-30% in share trading value at WFE global level in USD terms), 67% of domestic share trading was generated by large cap company stocks versus 64% in 2008
- Despite the surge of the large segment trading, it is worthwhile mentioning the strong resilience of small and micro company stocks trading as they remarkably succeeded in maintaining their share in trading value at the same level registered in 2008 (6% for micro – 7.5% for small caps)
Main findings (cont. 1)

**Segmentation of number of trades at WFE level**

- Trading of large companies generated the largest number of trades (57%), a significant increase from 2008 (47%) which followed the rise in its share in total trading value.
- As last year, the relatively high number of trades generated by the micro cap (12%), small (8%) and mid cap segments should be mentioned, although experiencing a small slowdown.

**Segmentation in Americas region**

- Following the general improvement in market cap in 2009, the large cap segment represented 74% of total market cap against 69% in 2008, the highest percentage across the 3 regions (for example, NYSE Euronext US domestic market cap was composed of 97% of large companies). As noted last year: less importance of small & micro cap segments than in the 3 other regions.
- In trading value: the preeminence of large cap shares trading regained space after being somewhat contested by the crisis in 2008. With 62% in 2009, it remained well below its pre-crisis level at 78% in 2007.

**Segmentation in Asia-Pacific region**

- The change in the distribution of market cap by segments between 2009 & 2008 was less significant than at WFE or Americas levels. Despite the increase in the weight of the large segment (representing 70% of total), the other market segments kept more or less the same proportion (20% for the mid cap segment, 5% and 4% for the small and micro ones respectively.)
### Main findings (cont. 2)

#### Segmentation in Asia-Pacific region (cont.)

- In the segmentation of listed companies, 2 trends could be observed in 2009: an increase in large cap segment to almost 10% v. 5.6% in 2008 and a strong rise in mid cap segment to 30% v. 19% in 2008. This evolution could be linked to the economic development of the region where companies tend to get bigger.
- In trading value segmentation: it is interesting to note the relative stability of all segments at their levels registered in 2008. Contrary to other regions, the large cap segment has not increased its share in total trading (and even slightly receded) with 58% compared to 60% in 2008.
- Finally, when looking at the number of trades segmentation, it is interesting to note 2 features: the relatively small number of trades generated by large cap trading (36% v. 57% at WFE level, 70% in Americas, and 64% in EMEA); secondly, the high number of trades generated by mid, small & micro segments which all combined represented 63% of trades.

#### Segmentation in EMEA

- The surge in global market cap has mostly benefited to the large cap segment whose weight increased to 76% v. 67% in 2008. Interesting to note too is the strong resilience of the micro cap segment (5.1% in 2009 against 5.5% in 2008).
- The segmentation of the number of companies revealed two interesting facts: the sharp increase in large cap segment to 13% from 7.5% in 2008, and the decline of the micro cap segment, although still representing more than half listings in the region.
- The segmentation of share trading shows that the large cap segment represented 73% of total in 2009, an increase on 68% of 2008. Small and micro cap segments managed to keep their share in trading at 7% both while the mid cap segment receded to 14% of total against 19% in 2008.
The rise in market cap in 2009 (+46% in USD) has pushed up again the large market cap segment in all areas

- domestic market cap
- number of domestic listed companies
- share trading value
- number of trades

Meanwhile, this surge in large cap segment has not affected the share of the small & micro cap ones which showed a strong resilience especially visible in their importance in trading value and number of trades

These effects can be observed in all regions across WFE, although with varying intensity

In general, and logically, big exchanges had a higher part of their market capitalization composed of the large segment; this is also true for the number of companies, trading and number of trades. In addition, they had the widest distribution among the four segments in terms of listings

Turnover velocity ratios have experienced a large shift between 2008 & 2009: in general, velocity ratios show that the most capitalized segments have not always the largest velocities (example: the small cap segment)

Turnover velocities are differing between regions confirming the varying focus put on large, mid, small and micro caps companies even if common features can be found

While in 2008, turnover velocities of mid, small, micro caps were very important, in 2009 the velocity of larger cap segments regained some ground
Distribution of domestic market capitalization at WFE level by market segment (average data)

In 2008:
- Large cap: 66,9%
- Mid cap: 20,7%
- Small cap: 7,1%
